

**GYPSUM PLASTER PRIMER COAT**

It is especially used as adherence primer before gypsum application on concrete based surfaces, such as column, curtain, wall, ceiling and etc.

It increases adhesion strength of gypsum and gypsum – lime based liquids to concrete surfaces by means of its formula with quartz sand additive.

It prevents rapid water loss of plaster and thereby formation of cracks.

It is appropriate for usage on internal spaces, and it is not advised to be used on dampened and wet surfaces.
